VACCINES

Why is it important for me and my child to get vaccinated for COVID-19?

COVID-19 vaccines are safe and effective at preventing severe illness and death from COVID-19. Getting a COVID-19 vaccine is one of the best ways to slow the spread of COVID-19. Many schools serve children under the age of 12 who are not currently eligible for vaccination. So, K-12 school administrators must use other prevention strategies to prevent COVID-19 from spreading.

The known benefits of COVID-19 vaccination outweigh the known and potential risks. There have been very limited reports of rare conditions including myocarditis or pericarditis, Guillain-Barré Syndrome, and thrombosis with thrombocytopenia syndrome (TTS). Risk of severe illness is still much greater for people who are not vaccinated against COVID-19.

COVID-19 vaccination is recommended for all people aged 12 years and older, including people who are pregnant, breastfeeding, trying to get pregnant now, or might become pregnant in the future. If you have concerns about COVID-19 vaccination, talk with your child’s doctor, your doctor, nurse, or clinic.

Can the school ask me or my child about my child’s COVID-19 vaccination status?

It depends—state laws establish vaccination requirements for school children; so policies or practices related to providing or receiving proof of COVID-19 vaccination should comply with all state and local regulations. State laws also establish the enforcement of school vaccination requirements and exemptions. Check your state.gov website for more information.

Can schools be open for in-person learning if not all teachers are vaccinated?

Yes, but this increases risk within the school. The most important and effective strategy we have right now to help schools stay open is having high levels of vaccination among students ages 12 years and up, educators, staff, and family members. Using multiple prevention strategies at the same time remains critical to protecting everyone, including students, educators, and staff. Prevention strategies include universal masking, physical distancing, and ventilation. Visiting your state website and keeping up to date on changes is the best way to be informed of changes.

SAFE ACTIVITIES

Choose safer activities for your family. Outdoor activities are safer than indoor ones. If you are indoors, choose a location that is well ventilated, for example a room with open windows, and know when to wear a mask.

Avoid activities that make it hard to stay 6 feet away from others.

If your family member is younger than 2 years old or cannot wear a mask, limit visits with people who are not vaccinated or whose vaccination status is unknown and keep distance between your child and other people in public.

Regardless of which safer activities your family chooses, remember to protect yourself and others.

Stop-the-Spread
Children, youth and teens can't learn if they don't feel safe. Stop the Spread and protect those who can't get a vaccination by wearing a mask indoors or if you have not been vaccinated and keep our kids in school.
WHERE TO GET ACCURATE INFORMATION ON COVID-19
The CDC (Center for Disease Control, CDC.gov) Guidance for COVID-19 Prevention is the best place to get updated and accurate scientific information. The information is always changing and the CDC gives guidance based on the latest science to prevent and control disease, injury, and disability. All recommendations are based on available scientific data including outbreak investigations and tracking cases of COVID-19 in children.

Be Safe

KNOW THE FACTS

WHAT YOU CAN DO TO PROTECT YOUR FAMILY, FRIENDS AND COMMUNITY
1. Know COVID-19 symptoms
2. Ask your school what the policies are to safely protect your child.
3. Wear masks indoors, everywhere.
4. Social distance
5. Wash hands often and keep your hands away from your face.
6. If you are exposed, quarantine for 10 days.
7. Millions of people have safely received a COVID-19 vaccine

Get Vaccinated

There can be no keener revelation of a society's soul than the way it treats its children.

Nelson Mandela
Know the FACTS

Wear Face Mask
Wash Hands
Cough on your elbow
Avoid Handshake
Keep Social Distancing
Use Hand Sanitizer
